PROFESSIONAL SUMMARY

Ambitious B.Tech graduate (2026) in Artificial Intelligence & Data Science with robust hands-on experience in Python application development, full-stack systems, and intelligent solutions. Proficient in Object-Oriented Programming (OOP), building scalable, secure applications using Java, Python, Spring Boot, Microservices, and the MERN stack. Experienced in REST APIs, database management (SQL), and web frameworks (Django, Flask, FastAPI). Actively integrates modern AI technologies like LLMs, LangChain, and RAG. Equipped with a comprehensive understanding of the Software Development Lifecycle (SDLC), supported by professional training in QA automation (Selenium) and cloud platforms (AWS, GCP, Azure). Passionate about automation scripting, writing clean code, and delivering user-centric, high-performance software solutions.

TECHNICAL SKILLS

- **Programming Languages:** Python (Core, OOP, Scripting), Java (Core, OOP, Collections, Multithreading, Exception Handling, File Handling), JavaScript.
- **Data Structures & Algorithms:** Core Data Structures, Search & Sort Algorithms, Problem-Solving.
- **Web & API Frameworks:** FastAPI, Django, Flask, REST APIs, Spring Boot, Microservices, Node.js, Express.js, JDBC, API Integration, Core API, MERN Stack.
- **Frontend Technologies:** HTML, CSS, JavaScript, React.js, jQuery.
- **AI, ML & Data Analytics:** Data Analysis & Visualization, Pandas, NumPy, LLM, LangChain, RAG, Nvidia-Nemotron, Machine Learning Data Models, Data Cleaning/Training, Gemini APIs, Chatbot/AI Applications, AI Coding Assistants (GitHub Copilot, Claude Code, OpenAI Codex).
- **Databases & DBMS:** SQL, MySQL, Relational Databases, MongoDB, MongoDB Atlas, MongoDB Compass, DBMS.
- **Testing & Automation:** Automation Tools/Scripting, Selenium WebDriver (Java), TestNG, XPath, API Testing, Manual Testing, Automation Frameworks.
- **Concepts & Methodologies:** Object-Oriented Programming (OOP), SDLC, STLC, Agile Methodology, JWT (Role-Based Authentication).
- **DevOps, Tools & Cloud Platforms:** Version Control (Git, GitHub, Git Bash), Cloud Platforms (AWS, GCP, Azure), Docker, Kubernetes, Terraform, CI/CD Concepts, IntelliJ IDEA, Eclipse, JIRA, JMeter.

PROJECTS

Heart Disease Prediction System

- Engineered a machine learning platform utilizing structured data models to predict heart disease risk with high accuracy.
- Utilized Pandas and NumPy for comprehensive data manipulation, data cleaning, and statistical preprocessing.
- Developed backend service layers with FastAPI and Flask to expose REST APIs for seamless integration with AI models.
- **Technologies Used:** Python, Pandas, NumPy, Data Cleaning, Data Training, REST APIs, Flask, FastAPI, Gemini APIs.

Employee Management System

- A comprehensive full-stack database-driven system designed to securely and efficiently manage employee tasks, attendance, and reporting, built on a robust Java backend.
- Developed a role-based Employee Management System with Admin, Manager, and Employee access controls.
- Implemented secure authentication, employee management (CRUD operations via SQL), and role-specific dashboards.
- Built a task management module allowing Admins and Managers to assign, update, and track employee tasks with timeline-based status monitoring.
- Enabled employees to view assigned tasks, update progress, and maintain transparency through assignment history and real-time status updates.
- **Technologies Used:** Java, React.js, CSS, HTML, Spring Boot, JDBC, MySQL, SQL, JWT (Role-Based Authentication), REST APIs.

Student Tracking Marks App

- Developed a secure, scalable, database-driven application designed to track, store, and manage student academic performance and marks efficiently.
- Integrated data reporting views using dynamic web interfaces to assist faculty in tracking historical student trends.
- **Technologies Used:** Java, React.js, CSS, HTML, Spring Boot, JDBC, MySQL, REST APIs, JWT (Role-Based Authentication).

Cyber Security Client Project (Trend Matric Solutions)

- Crafted a clean, modern, and pixel-perfect responsive UI with a strong focus on an intuitive user experience for a cybersecurity client.
- **Technologies Used:** React.js, Node.js, HTML, CSS, Express.js, REST APIs, MongoDB.

Automation Testing on SBI Website

- Created Python and Java automation scripts to automate login, navigation, and validation scenarios.
- Automated login, navigation, and validation scenarios using Selenium WebDriver.
- Developed reusable automation scripts using Java and TestNG.
- Executed functional and regression testing through automated test cases, improving testing efficiency and reducing manual testing effort.
- **Technologies Used:** Python, Automation Scripting, Java, Selenium WebDriver, TestNG.

Manual Testing on SBI Website

- Designed and executed test cases based on functional requirements following the SDLC and STLC.
- Performed functional, usability, and validation testing.
- Identified, documented, and reported software defects while participating in defect tracking and test execution activities.
- **Technologies Used:** Test Cases, Test Plans, SDLC, STLC.

EDUCATION

- **B.Tech in Artificial Intelligence & Data Science** – Viswam Engineering College, Madanapalli (2022 – 2026)
- **Intermediate (MPC)** – Bharathi Junior College, Madanapalli (2020 – 2022)
- **SSC** – Indian Public School (2019 – 2020)

PROFESSIONAL TRAINING & CERTIFICATIONS

- Java Automation Testing with Selenium – QSpiders
- MERN Stack Development – AlgoPrep
- NPTEL Software Engineering Certified
- IBM Cloud Fundamentals
- NPTEL Internet of Things (IoT)

LEADERSHIP & EXTRACURRICULAR

- President, AI & DS Student Association
- Class Representative (CR)
- Organized Hackathons, Workshops, and Technical Events
